Date PET/CT required by:

PET/CT Tracer: F18 FDG F18 PSMA 68 Ga DOTA

Please tick PET indication and diagnostic CT requirements			Diagnostic contrast CT			
Grouping	Medicare eligible indication (Medicare criteria on reverse)	PET	Brain	Neck	Chest, Abdo & Pelvis	Other
Brain	Malignant brain tumour, after definite therapy (61538)					
	Refractory epilepsy, being evaluated for surgery (61559)					
Breast	Staging of locally advanced breast cancer (61524)					
	Evaluation of suspected metastatic breast carcinoma (61525)					
GIT - Lower	Colorectal carcinoma, for active therapy (61541)					
GIT - upper	Oesophageal or GEJ carcinoma, staging (61577)					
	68 Ga - DOTA , evaluation of neuroendocrine tumour (61647)					
Gynaecological	Ovarian carcinoma, suitable for active therapy (61565)					
	Uterine cervix carcinoma, primary staging (61571)					
	Uterine cervix carcinoma, recurrent cancer for staging (61575)					
Head & neck	Head and neck cancer, staging (61598)					
	Head and neck cancer, suspected residual cancer (61604)					
Lung	Solitary pulmonary nodule, staging (61523)					
	Non-small cell lung cancer, staging (61529)					
Lymphoma	HL or NHL, initial staging or untreated (61620)					
	HL or NHL, assess response to first line therapy (61622)					
	HL or NHL, restaging of recurrence (61628)					
	HL or NHL, assess response to second line chemo (61632)					
Melanoma	Melanoma, suspected metastatic or recurrence (61553)					
Metastatic SCC	Metastatic SCC, unkown primary (61610)					
Sarcoma	Sarcoma, initial staging (61640)					
	Sarcoma, suspected residual or recurrent (61646)					
	Non-Rebatable indications	PET	Brain	Neck	Chest, Abdo & Pelvis	Other
Prostate	PSMA, for prostate cancer

Patient preparation

You will be provided with important patient preparation information for your PET/CT study.
For more information about your PET examination please visit epworthmedicalimaging.com.au

PET	Medicare description
61523	Whole body FDG PET study, performed for evaluation of a solitary pulmonary nodule where the lesion is considered unsuitable for transthoracic fine needle aspiration biopsy, or for which an attempt at pathological characterisation has failed.
61524	Whole body FDG PET study, performed for the staging of locally advanced (Stage III) breast cancer, for a patient who is considered suitable for active therapy.
61525	Whole body FDG PET study, performed for the evaluation of suspected metastatic or suspected locally or regionally recurrent breast carcinoma, for a patient who is considered suitable for active therapy.
61529	Whole body FDG PET study, performed for the staging of proven non-small cell lung cancer, where curative surgery or radiotherapy is planned.
61538	FDG PET study of the brain for evaluation of suspected residual or recurrent malignant brain tumour based on anatomical imaging findings, after definitive therapy (or during ongoing chemotherapy) in patients who are considered suitable for further active therapy.
61541	Whole body FDG PET study, following initial therapy, for the evaluation of suspected residual, metastatic or recurrent colorectal carcinoma in patients considered suitable for active therapy.
61553	Whole body FDG PET study, following initial therapy, performed for the evaluation of suspected metastatic or recurrent malignant melanoma in patients considered suitable for active therapy.
61559	FDG PET study of the brain, performed for the evaluation of refractory epilepsy which is being evaluated for surgery.
61565	Whole body FDG PET study, following initial therapy, performed for the evaluation of suspected residual, metastatic or recurrent ovarian carcinoma in patients considered suitable for active therapy.
61571	Whole body FDG PET study, for the further primary staging of patients with histologically proven carcinoma of the uterine cervix, at FIGO stage IB2 or greater by conventional staging, prior to planned radical radiation therapy or combined modality therapy with curative intent.
61575	Whole body FDG PET study, for the further staging of patients with confirmed local recurrence of carcinoma of the uterine cervix considered suitable for salvage pelvic chemoradiotherapy or pelvic exenteration with curative intent.
61577	Whole body FDG PET study, performed for the staging of proven oesophageal or GEJ carcinoma, in patients considered suitable for active therapy.
61598	Whole body FDG PET study performed for the staging of biopsy-proven newly diagnosed or recurrent head and neck cancer.
61604	Whole body FDG PET study performed for the evaluation of patients with suspected residual head and neck cancer after definitive treatment, and who are suitable for active therapy
61610	Whole body FDG PET study performed for the evaluation of metastatic squamous cell carcinoma of unknown primary site involving cervical nodes.
61620	Whole body FDG PET study for the initial staging of newly diagnosed or previously untreated Hodgkin or non-Hodgkin lymphoma.
61622	Whole body FDG PET study to assess response to first line therapy either during treatment or within three months of completing definitive first line treatment for Hodgkin or non-Hodgkin lymphoma.
61628	Whole body FDG PET study for restaging following confirmation of recurrence of Hodgkin or non-Hodgkin lymphoma.
61632	Whole body FDG PET study to assess response to second-line chemotherapy if haemopoietic stem cell transplantation is being considered for Hodgkin or non-Hodgkin lymphoma.
61640	Whole body FDG PET study for initial staging of patients with biopsy-proven bone or soft tissue sarcoma (excluding gastrointestinal stromal tumour) considered by conventional staging to be potentially curable.
61646	Whole body FDG PET study for the evaluation of patients with suspected residual or recurrent sarcoma (excluding gastrointestinal stromal tumour) after the initial course of definitive therapy to determine suitability for subsequent therapy with curative intent.
61647	~Whole body ⁶⁸ Ga-DOTA-peptide PET study (including any associated computed tomography scans for anatomic localisation and attenuation correction) if: (a) a gastro-entero-pancreatic neuroendocrine tumour is suspected on the basis of biochemical evidence with negative or equivocal conventional imaging; or (b) both: (i) a surgically amenable gastro-entero-pancreatic neuroendocrine tumour has been identified on the basis of conventional techniques; and (ii) the study is for excluding additional disease sites~

Your doctor has recommended you use Epworth Medical Imaging.
You may choose another provider but please discuss this with your doctor first.
